Grey-Bruce-Owen-Sound Greens

Meet Alex Drossos

Alex Drossos is 28 years of age, and was born in London, Ontario. He has degrees in Computer Engineering, Biology and Health Services Management. Alex works at Cancer Care Ontario as the Program Manager, Surgical Oncology. He oversees provincial initiatives to improve the quality of cancer surgery in Ontario.

“We all want good health - health of our people, health of our environment, and health of our economy,” Alex explains. “But we need health promotion, not just health care. We need to create jobs that will enhance our planet rather than destroy it. We need to eliminate disparities in the health and welfare of special populations, such as our First Nations. We have the people, the tools and the opportunity to make a difference. We must do it today.”

Alex’s family has been in Grey-Bruce for over 40 years. Despite living outside of the region he spends much time, winter and summer, with his family members in the area. “I have come to love this part of Canada and I want to protect it,” he says. “To do so I am convinced we need a political party with new ideas and a long term vision.”

“This region has issues that are different from the rest of Canada. We produce abundant resources that get shipped outside of the area. Instead we must process these resources in sustainable industries right here in Grey-Bruce. Only in this way will we have jobs for our youth, locally grown foods we can trust and a more prosperous regional economy,” Alex says. “That is why I am running for the Green Party in Grey-Bruce-Owen Sound.”

Green Party of Canada
Parti Vert du Canada

The GREEN ECONOMY is the Economy of the Future

- A revenue-neutral Green Tax Shift will lower taxes on incomes and employment to create more jobs; we will shift taxes to the things we don't want - like pollution, waste, and the unsustainable use of dwindling resources
- Community based economics will create incentives to spend your money locally, to ensure more jobs and more local benefits
- "Green Collar" jobs, such as energy conservation retrofits and local value-added manufacturing will encourage efficient resource use and recycle profits within our communities
- "Ecological Conservatism" and green ideas get promoted; waste, pollution, and inefficient energy use are discouraged
- Three bottom lines are improved at once:
Financial • Social • Ecological

We are asking voters to redefine progress.

Clean air is not a radical concept.
Nor is safe drinking water.

The Green Party is the
voice for all those seeking
a better way to live.

HEALTH! ...Not Just Health Care

The Green Party of Canada has shown consistent leadership in promoting a "prevention first" health care strategy. The system is breaking down, not for lack of funding, but because current policies are creating illnesses faster than our health system can cope. Instead, Greens know that Prevention is the Key to sustainable health care. We will:

- Invest in health awareness - to encourage healthy lifestyles and avoid sickness costs
- Support complementary methods - such as proven naturopathy and chiropractic techniques
- Reduce preventable illness - with aggressive strategies to reduce obesity, stroke, heart disease, diabetes, hypertension, and stress
- Clean the food supply - promote nutrition, and discourage disease-causing agents such as junk food, tobacco, and pesticides; stop the genetic contamination caused by GM foods

Real Democracy FOR A CHANGE!

Canada's "First-Past-the-Post" electoral system is antiquated and outstandingly undemocratic. It creates "artificial majorities" where over 50% of the votes count for nothing. It must be fixed!

Greens will implement Proportional Representation and fixed election dates - a system used by almost all of the world's modern democracies.

Who is the Green Party?

Our platform presents a positive vision of the future. Our social programs focus on increasing our quality of life. Our economic policy lays the foundations for long-term, sustainable wealth. Our foreign policy makes principled stands on international issues. Many Canadians are waiting for a political party that they can really believe in. The Green Party has grown from the bottom, up - one conversation at a time, among people who are dedicated to doing politics differently. We are not a political machine. We do not have financial backers with deep pockets. We are just ordinary citizens, making an extraordinary commitment.

Sustainable Alternatives

The Green Party offers solutions that most other parties only dream about. We will make Canada a world leader in leading-edge strategies, such as:

- **Renewable Energy**
Phase in clean, breathable alternatives; phase out bad, asthma-causing air!
- **Organic Agriculture**
System wide transition to sustainable production and chemical-free food, prioritized on local, nutritious, healthy supply
- **Smarter Transportation**
Stop subsidizing sprawl; support clean, cheap alternatives; promote clean fuels and low-emission vehicles
